

Profile Summary

Software Developer with hands on experience in Python, JavaScript, React, REST APIs, and MySQL. Applies Data Structures & Algorithms to write clean, maintainable code. Comfortable working across the stack, from backend logic to responsive user interfaces. Open to full time opportunities on a collaborative engineering team.

Technical Skills

Programming Languages: Python, JavaScript, SQL (MySQL)

Web Development: React, REST APIs, HTML, CSS, Tailwind CSS

Tools & Platforms: Git, GitHub, Flask, TensorFlow, Vercel

Programming Coursework: Data Structures & Algorithms, Object Oriented Programming (OOPS), Operating Systems, Computer Networks, Database Management System (DBMS)

Projects

Signature Fraud Detection System | Python, Flask, TensorFlow, React [GitHub](#) | [Live link](#)

- Architected a Siamese Neural Network (SNN) based signature verification system, achieving 90%+ classification accuracy on real world datasets.
- Built the backend independently with Python, Flask, and TensorFlow, including a 2 stage image preprocessing pipeline using NumPy and Pillow.
- Designed a real time React frontend for live signature validation.
- Deployed a production grade app with Gunicorn and Flask CORS on a 4 worker architecture to handle high concurrent load.

ZenPulse – Productivity & Task Management App | React, JavaScript, Python, REST APIs [GitHub](#) | [Live link](#)

- Led independent development of a TickTick inspired SaaS style productivity web app, building a React frontend spanning 10+ features – dashboard, tasks, projects, categories, search, filters, priorities, due dates, recurring tasks, and dark/light mode.
- Designed a Python based REST API backend with 8+ CRUD endpoints across tasks and projects, adding request validation and structured error handling.
- Implemented JWT based authentication for user specific task management, backed by a 4 table relational database schema (Users, Projects, Tasks, Subtasks).
- Delivered a productivity analytics feature with Pomodoro focus sessions and daily/weekly completion statistics across 2 dashboard views, going beyond basic CRUD.

Luxury Automotive Showcase | React, Tailwind CSS [GitHub](#) | [Live link](#)

- Developed a 4 page React automotive showcase site inspired by Bugatti’s design language, connecting Home, Car Listing, Car Details, and Contact pages via React Router.
- Implemented car search and filtering with a multi image gallery per car and API driven data fetching that updates listings and specs in real time.
- Assembled a library of 10+ reusable React components with loading and error states, tested across 3 breakpoints for full responsiveness.
- Added a contact/enquiry form to simulate a real world business use case rather than a static UI clone.

Certifications & Workshops

- **NPTEL – Database Management Systems (2025):** 12 week course covering relational databases, SQL optimization, normalization, and transaction management.
- **Data Science Workshop – Ether InfoTech (July 2024):** 3 day workshop on Python for data analysis, ML fundamentals, EDA, and data visualization.

Education

B.E. Computer Science and Engineering (Graduated)	2022 – 2026
KIT – Kalaigarkarananidhi Institute of Technology, Coimbatore	GPA: 8.1 / 10 (81%)
HSC & SSLC	2022 & 2020
Equitas Gurukul Matric Higher Secondary School	HSC: 88.83% SSLC: 77.76%
